

## OMØ Mobile Fan

The OMØ Mobile Fan is a unique and highly efficient ventilation solution that can reduce the dust load and improve the working environment in many different contexts.

The OMØ Mobile Fan has been developed to solve this problem and has a unique exhauster with a capable of 20.000m<sup>3</sup>/h. In addition, it is mounted on a trailer, so that it can be used almost anywhere.

The OMØ Mobile Fan can be used for boiler cleaning, ventilation cleaning, cleaning paint containing lead and PCBs, sandblasting, deslagging, etc.

The OMØ Mobile Fan can be used for boiler cleaning. It helps to reduce dust load and optimize the working conditions:

- Reduction in changeover time with partial monarflex or wood barriers
- Can quickly be switched to by-pass filters
- By blocking the electrical filter, you can turn off the induced draft fan and sandblast the boiler while working on the flue gas side
- By blocking the furnace, you sandblast inside the boiler while working on, for example, the grate curtain/hoppers, etc.

Can also be used for:

- Cooling
- Ventilation for inconel welding
- Extraction of water vapour from water cutting
- Blasting with sand and glass
- Blow-down of electrostatic precipitators

The OMØ Mobile Fan has enough vacuum power for 2 sandblasters.

OMØ Mobile Fan is mounted on a trailer so that it can be used almost anywhere.
